

Les algorithmes, l'art et le design

Un algorithme ?

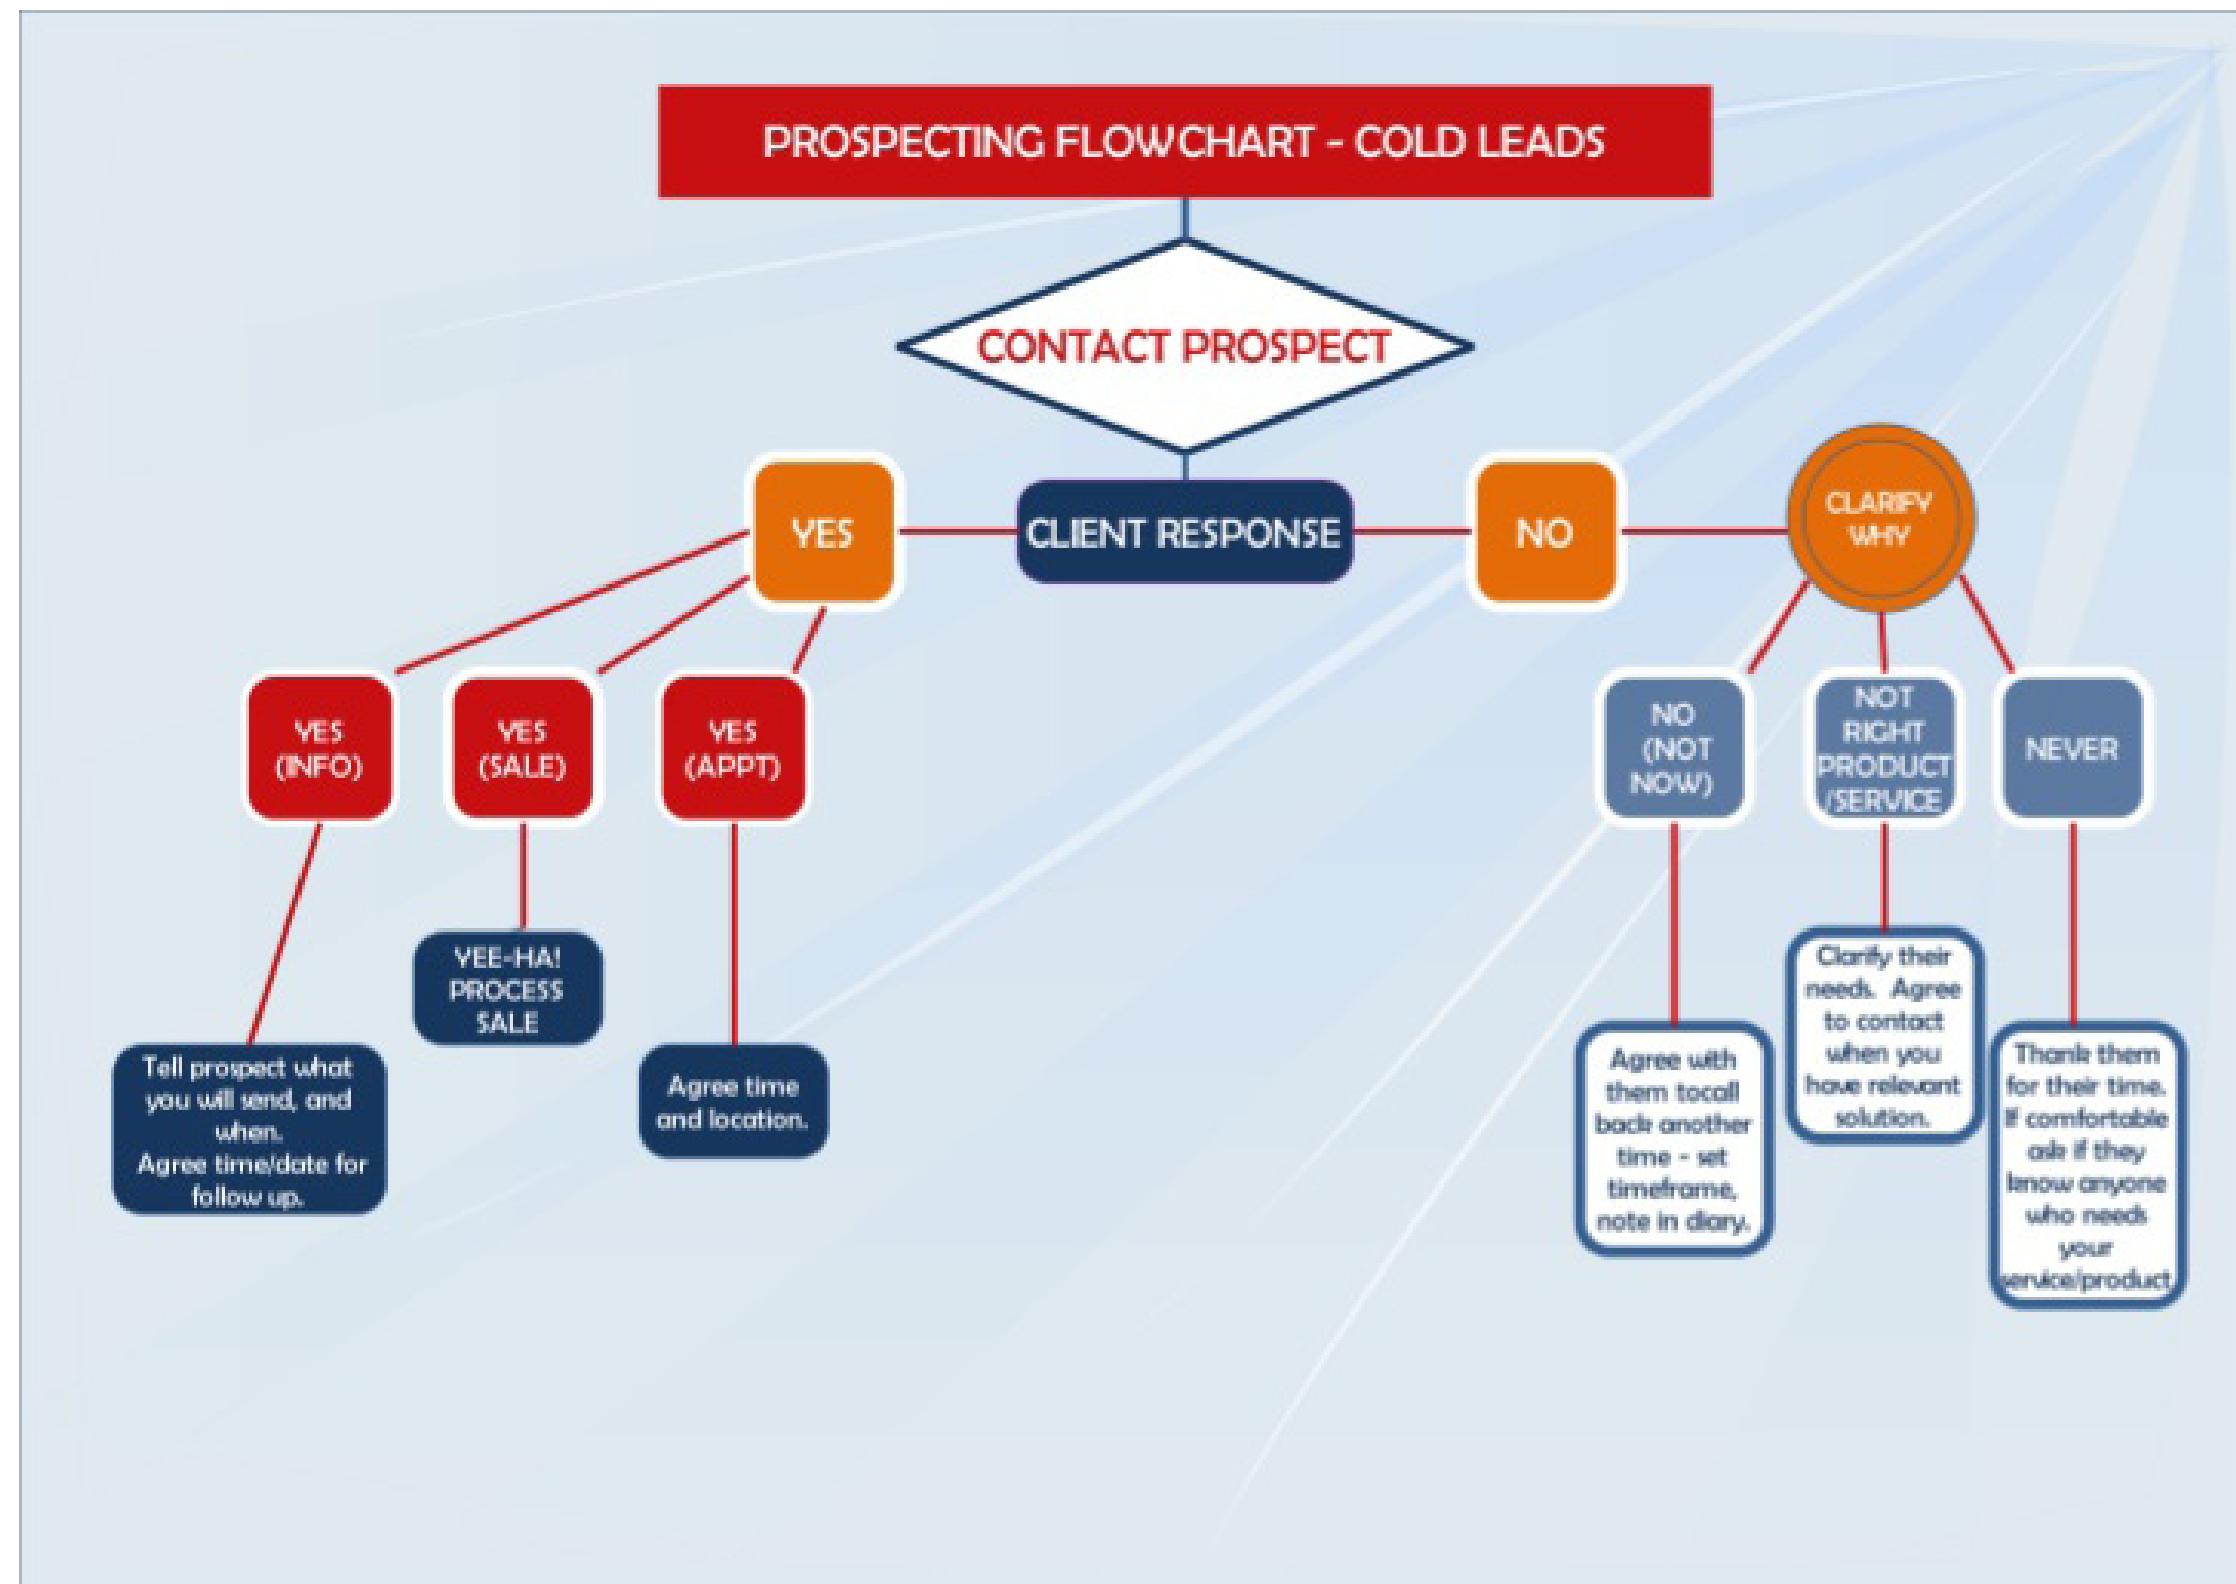

Un algorithme est une série d'instructions permettant de résoudre un problème.

Il comporte en générale des données en entrée et un résultat en sortie.

Exemple d'algorithme Algorithme d'Euclide

Google ALGORITHMS As of March 2019

						
Panda	Penguin	Hummingbird	Fred	Pigeon	RankBrain	Mobile
Panda 4.2 Update: July 18, 2015 This update was released to focus on spammy links and low-quality content. This update was welcomed by all the sites that were penalized by Panda 4.1 however rectified the issues to get out of the pack. Panda 4.2 did a recheck of all the sites and the sites that performed well were stopped being triggered.	Penguin 4.0 Update: Sep 23, 2016 The update was integrated into Google's core ranking algorithm used to evaluate the site(s) while crawling it. The site started gaining its rank back after the issues that were responsible for a dip in their rank were resolved. The second change was that it stopped penalizing the entire website for the spam signal and started the individual page analysis.	Hummingbird Update: Aug 21, 2013 This update was released for the motive of focusing on the semantic search. The specific goal is to offer more relevant and personalized results on the basis of trends/pattern, location, and online behavior.	Google Link Quality Update: Mar 09, 2017 The update was related to the link quality. This update targeted sites that were over advertising. This used to attack the sites with more ads advertised to collect extra revenue and gave the inferiority complex to the content.	Google Local Algorithm Expands: Dec 22, 2014 Pigeon Google search algorithm aimed to offer better local search results by rewarding local businesses that have a strong organic presence with better visibility in traditional search, similar to the visibility a business may have seen previously in Google Maps.	RankBrain Related Search Update (undisclosed): Dec 10, 2015 This update boosted Google's special SERP features resulting in an increase in the number of SERP's containing related search as well as the improvement in the word count of related search phrases averagely.	Speed Update Release (Mobile): July 9, 2018 Google thought of releasing Speed update that forces the sites to improve the page speed on mobile so that it loads faster. This update is only for the sites that are extremely slow wherein the minor changes will not change the ranking on Google search. The markable changes need to be released so that Google notices the difference and rank the sites better.

La machine Imaginaire

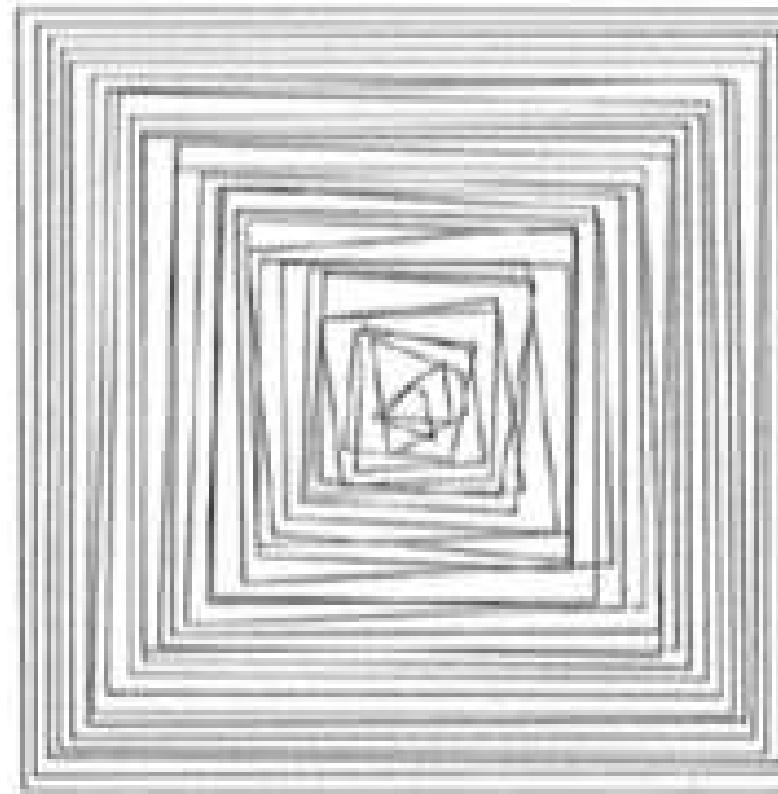

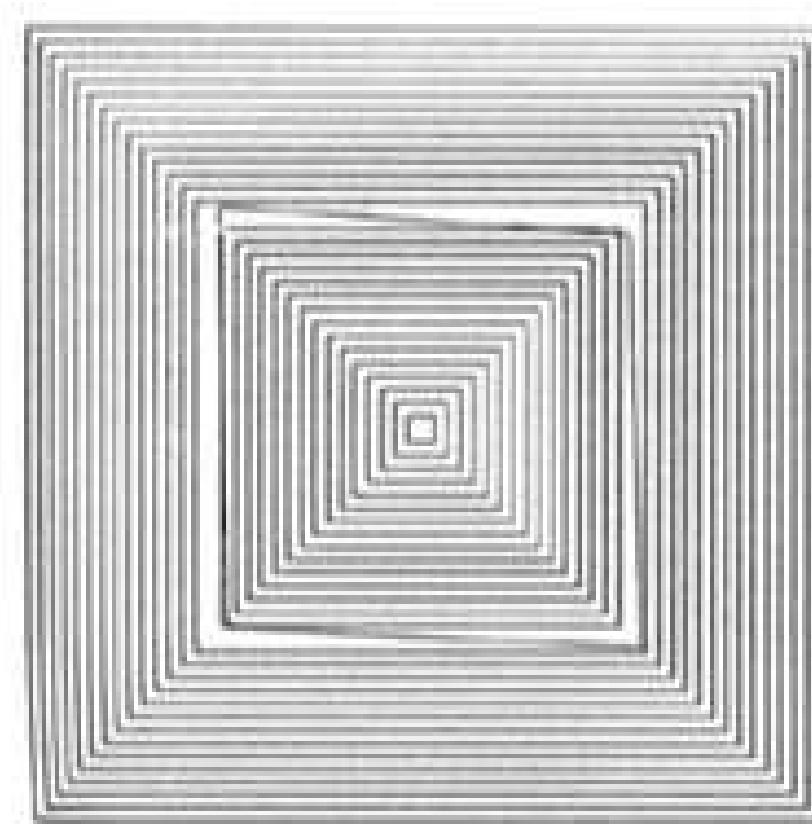

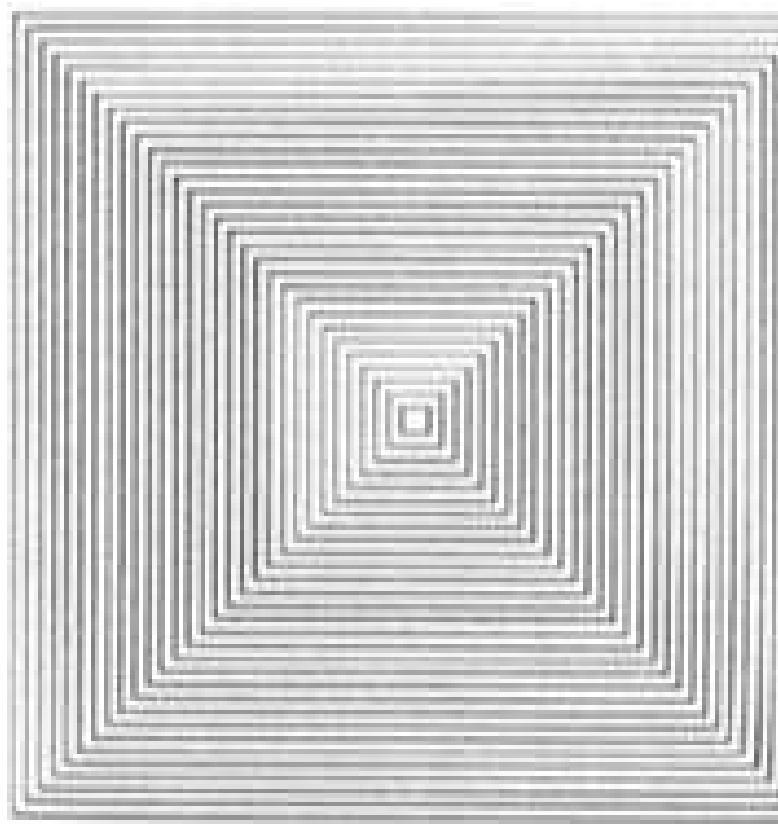

I imagined I had a computer. I designed a programme and then, step by step, I realized simple, limited series which were completed within, meaning they did not exclude a single possible combination of form. As soon as possible I replaced the imaginary computer, the makebelieve machine by a real one.

Conditional Design (2013)

On the 2nd of June, 2009,
we went to the beach

We did a workshop simulating a beautiful day at the beach.
(at night, at Lunas kitchen table)

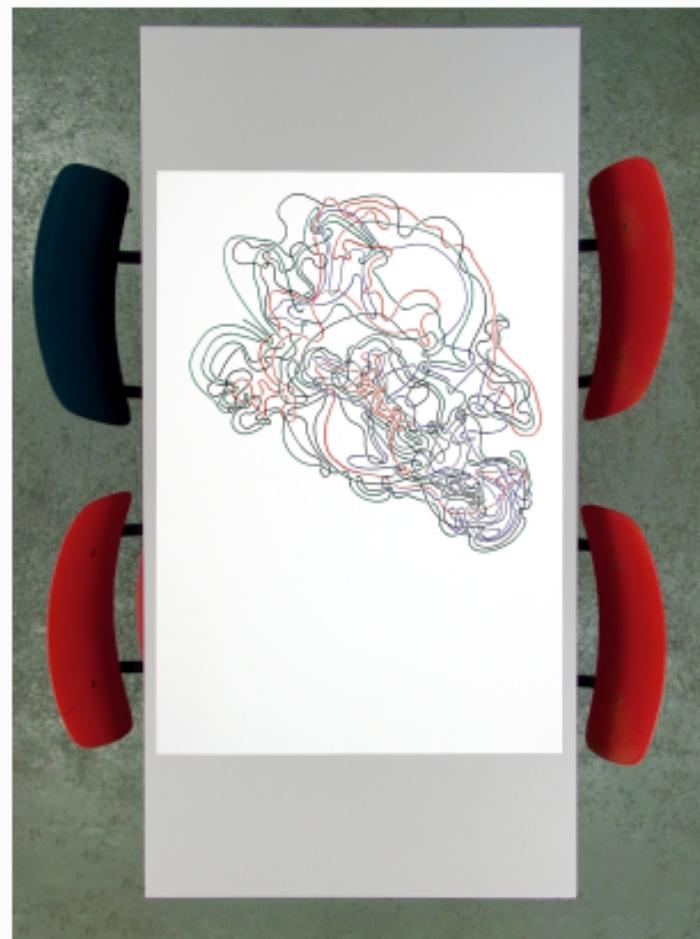

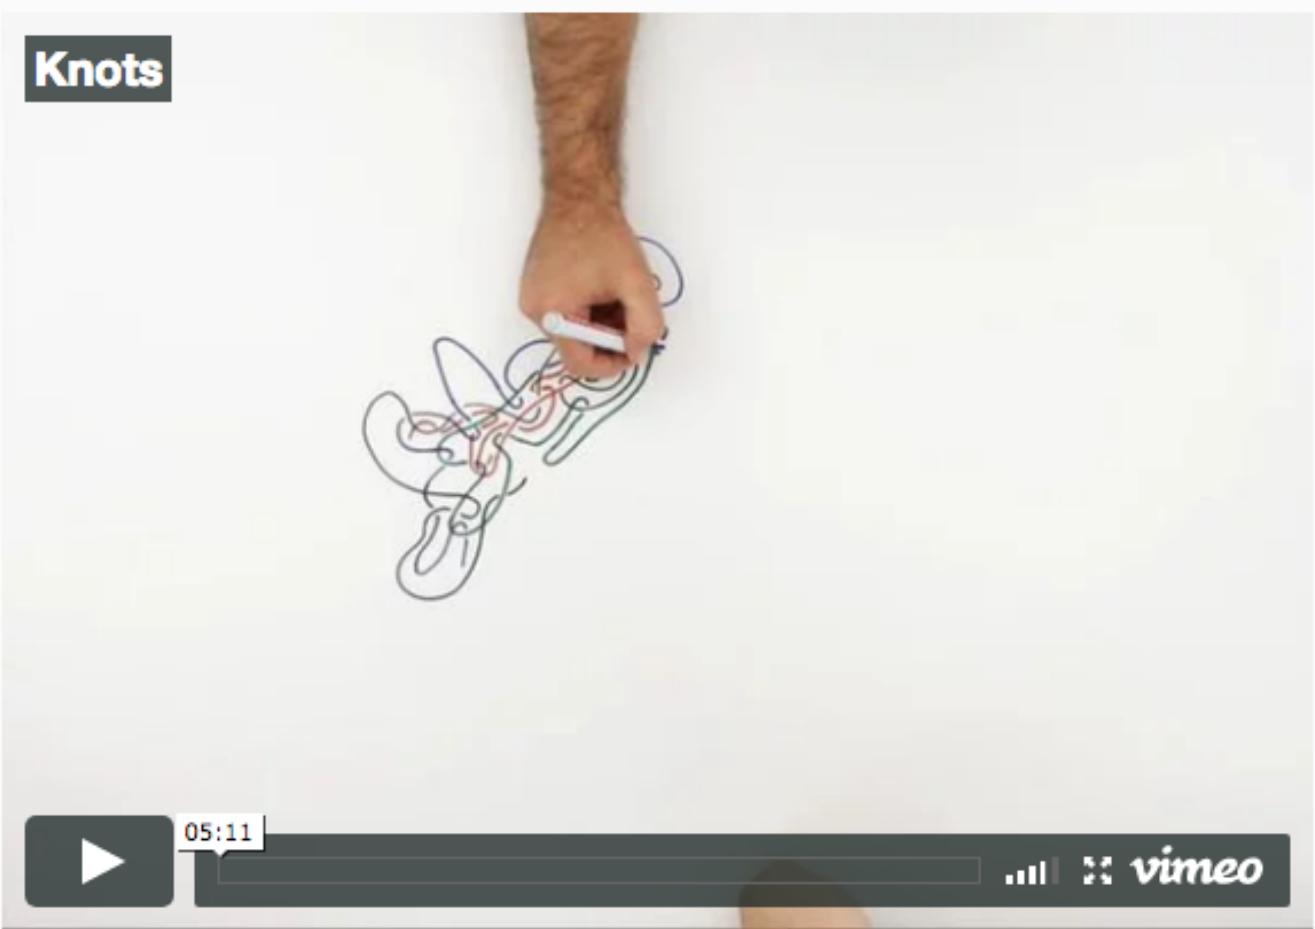

Roel: "entering the beach on a sunny day you will look for an empty place and position yourself right in the middle". – A fascinating form of self organization.

Instructions

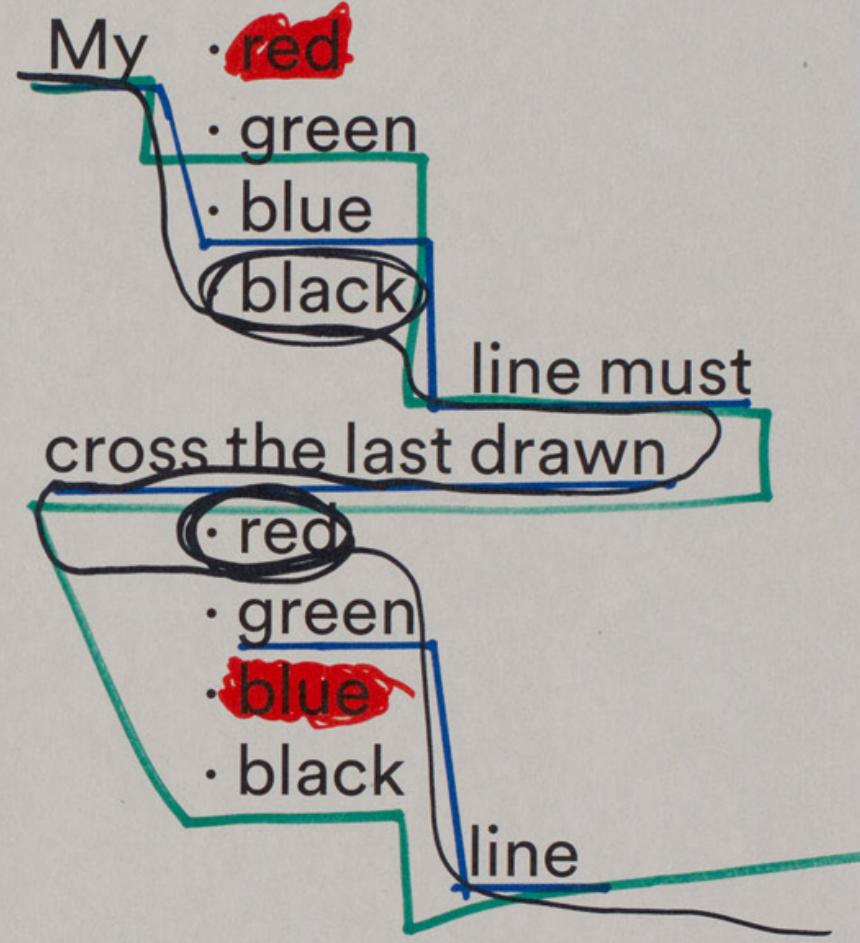

Each turn, find the most empty space on the paper and place a dot in the middle of it.

we knotted

Knots

1. Elongate your line on both sides by looping it over and under a line of another color.
2. You may not loop your own line or the line you looped in your last turn.
3. If you have no options left on one of the sides, that side is dead.
4. When both sides are dead, you may place a new line.

Conditional Design
Workbook

Valiz

1.3,
Do not cross
any other
lines.
